---

All, In our comment letter to EFSEC, we included a disk containing references. Unfortunately, that disk is mislabeled. We had intended to gather the references supporting Mr. Nordlund's review of additional information provided by Energy Northwest to NMFS (memo of 12-12-2013). What we actually sent was a DVD containing references for Mr. Nordlund's review of the original design information (Nordlund memo of 7-31-2013). We are gathering the references we had intended to send and will forward them when we have them all together. The disk we sent is still germane to our discussions, but is mislabeled. I encourage you to correct the label on the DVDs we sent by scratching out 12-12-2013 and inserting 7-31-2013. We should have the references gathered in a day or two.
